2. DNS Interrogation screenshot

(15 points)

```
> set type=ns
> espn.com
Server: ns-4.iastate.edu
Address: 129.186.78.200

Non-authoritative answer:
espn.com      nameserver = ns-122.awsdns-15.com
espn.com      nameserver = ns-1045.awsdns-02.org
espn.com      nameserver = ns-1936.awsdns-50.co.uk
espn.com      nameserver = ns-846.awsdns-41.net

ns-122.awsdns-15.com    internet address = 205.251.192.122
ns-846.awsdns-41.net    internet address = 205.251.195.78
ns-1045.awsdns-02.org   internet address = 205.251.196.21
>
```

- a. Mail server
 - i. None of the mail server answers gave a hostname. Only IPv6 and a few IPv4 addresses were given, and after some whois searching, I was able to figure out that ESPN outsources its mail servers to Amazon Web Services
 - ii. **awsdns-hostmaster.amazon.com**
- b. DNS server
 - i. ns-122.awsdns-15.com
 - ii. ns-1045.awsdns-02.org
 - iii. ns-1936.awsdns-50.co.uk
 - iv. **ns-846.awsdns-41.net**
- c. Find one other server
 - i. Searched for web servers (specifically IPv6)
 - ii. Addresses:
 - 1. 2600:9000:24f8:9200:d:ac18:e2c0:93a1
 - 2. 2600:9000:24f8:cc00:d:ac18:e2c0:93a1
 - 3. 2600:9000:24f8:3e00:d:ac18:e2c0:93a1
 - 4. 2600:9000:24f8:de00:d:ac18:e2c0:93a1
 - 5. 2600:9000:24f8:ee00:d:ac18:e2c0:93a1
 - 6. 2600:9000:24f8:a400:d:ac18:e2c0:93a1

4. Geolocation of host(s) screenshot
(10 points)

- a. What country
 - i. United States
 - b. Which ISP
 - i. Could not find
 - c. Who is providing the hosting of the website?
 - i. Amazon.com Inc.
 - d. Who is providing the target's DNS?
 - i. Amazon Route 53
- 5. Sensitive information on public website - screenshots/description of why useful**
(10 points)
- a. Employee rosters and email addresses
 - i. LinkedIn provides a large list of the roster for ESPN. I believe that further digging will allow me to find more personal information regarding these individuals and their importance to the company

- b. Technical documents (how to use services/login/etc)
 - i. There are publicly provided services/login available, so this might be a stretch to try to find, in my opinion.

6. Recent happenings in the news - screenshots/description of why useful
(10 points)

- a. Mergers
 - i. The most recent merger that ESPN has been involved in was with Disney and ABC back in 1996, where Disney became a majority stakeholder of ABC and subsequently ESPN.
- b. Acquisitions
 - i. ESPN has been acquiring different media for a while to expand themselves. Some companies that have been acquired are Fanzter, ExtraCorp, Racing Live, etc.

Recent acquisitions by ESPN Network

ESPN Network's most recent acquisition - [Fanzter](#) is a Consumer facing mobile and web apps, founded in 2007 and located in Farmington. ESPN Network acquired it in August 2014.

Here is the list of all acquisitions by ESPN Network sorted by the latest acquisition date:

Acquired on	Acquired Company	Acquisition...	Facilitators	Stake ...	Acquisiti...
Aug 2014	Fanzter	Undisclosed	-	7%	\$400
Aug 14, 2011	ExtraCorp	Undisclosed	Pier Capital	7%	\$117
Aug 06, 2008	Racing Live	Undisclosed	Lincoln International	3%	\$116
Aug 05, 2008	Racing Live	Undisclosed	Lincoln International	3%	\$121
Jun 12, 2008	Student Sports	Undisclosed	-	7%	\$146

- c. Where do you believe vulnerabilities may lie?
 - i. I believe that the espn.com site is relatively safe, but any vulnerabilities will likely lie outside of the site, with the employees or offhand espn sites that they link to, which could possibly be traced back to espn.com for use.

7. Vulnerable web apps

(15 points)

- a. Can you find any vulnerable web apps using Google Dorks against your target?
 - i. So far I've found nothing outright useful. It seems to be harder to find anything vulnerable regarding login and password because anybody can sign up and login with the site, not just certain individuals.
- b. Provide list of google queries you tried
 - i. site:espn.com filetype:pdf
 - ii. site:espn.com inurl:admin
 - iii. site:espn.com filetype:txt
 - 1. Found list of bots/ai (robots.txt) as well as list of disallowed and allowed search queries (or something like that. Might be useful)
 - iv. site:espn.com filetype:xls
 - v. site:espn.com filetype:doc
 - vi. site:espn.com intitle:"admin login"

8. Similar Domains

(15 points)

- a. Can you find any domains similar to the target for sale?
 - i. espnco.com, espnshop.online
- b. Are there domains that might benefit an attacker, should they be purchased?

- i. I believe if you're subscribed to anything related to ESPN, then espnco.com could be useful had that subscription information been released, because you could use that to send a link to the site via an email. The second domain could easily be used to send someone to a fake ESPN shop for sports gear.
